Steinar Jennings

CS290-Web Development

I created the suggested app, in a very simple format using sessions. I did not do any crazy formatting to make it look pretty, but I was able to test different instances of this. The main way I was understanding sessions, was by opening the address in different browsers, specifically vanilla chrome vs incognito, and I would see that I would have an empty to-do list in incognito, but I could close and reopen the page in regular chrome and return to the list that I had made before. Before I had set this up, I turned the get/post request submission from HW5 and added sessions to it, to extend upon understanding how the get and posts were working with the addidtion of another ripple into the mix. This was helpful before combining the to-do list and the weather app. I had a decent amount of trouble getting the weather script to run properly because of the xhtml request. I did not run it on my node app but rather left it as a script within the handlebars file.

Things I struggled with. I had a hard time with understanding static files and asynchronous functions. I watched an additional youtube video on the subject, and it helped clear it up somewhat. I think the best thing I can do is keep tinkering, so that is what I have done. The more I run into issues, google, and repeat, the more that I feel like I am understanding the content, because my issues are getting more and more specific. I have also had a good time digging through documentation as well, which is a skill I had not developed in any of my other classes so far.

In terms of setting up pages that accept forms, I think this is one of the skills that we have been able to drill down the most. I took the old form that posted to httpbin and it was easy to add some of the next frameworks to it to make it more complex. My issue still on all the assignments is reps. The condensed courseload is burdensome, but I think with next weeks assignment, it should be great practice.

Hello Steinar Jennings Here is your To Do List!

You have 6 items on your to do list.
